## College Drive Street Lighting

This notice is to inform residents backing onto College Drive between McKercher Drive and McOrmond Drive that eco-friendly LED street lighting will soon be installed. The street light poles are 50 feet tall and will be installed in the centre median. Once turned on at the end of May or beginning of June, they will cast a white light.

LED street lighting along College Drive is included as part of the Saskatoon Interchange Project. The LED lights:

- use approximately 55% less energy than high pressure sodium (HPS) lights
- use less electricity which translates into a reduction in greenhouse gas emissions and makes LED lights a more cost efficient choice overall
- allow for safer movement of vehicles and pedestrians through the area
- reduce night time accidents
- raise a sense of personal security

Street lights will be installed along the marked area in the image above.

Work on the College Drive and McOrmond Drive interchange is now underway and is expected to be completed in the fall of 2018.
