

Avenue H Reservoir Expansion Project Open House

**Wednesday, September 21, 2011
King George Community School Gymnasium
721 Avenue K South
6:00 p.m. – 9:00 p.m. (come-and-go)**

You are invited to a “come-and-go” Open House to view and comment on the proposed expansion of the Avenue H reservoir at the Water Treatment Plant. The expansion will include increasing the capacity of the reservoir to store more water, along with constructing a building to house an Ultraviolet (UV) disinfection system and a high lift pumping station. The new building is proposed to be constructed next to the expanded reservoir on 11th Street between Avenue H and Avenue I.

Increasing the reservoir water storage capacity and adding a high lift pumping station will allow the Water Treatment Plant to operate more efficiently and will ensure a constant supply of water during peak demand times. The addition of an Ultraviolet disinfection system will provide an added measure of safety to our water supply.

Construction is proposed to begin in Spring of 2012 and be completed in Spring of 2014.

Civic staff and the consultant will be in attendance to answer questions and gather feedback on the project.
