NUTANA SLOPE STABILITY UPDATE – JULY 2025

1 INTRODUCTION

WSP Canada Inc. (WSP) was retained by the City of Saskatoon (COS) to complete the monitoring of select geotechnical instrumentation and provide the monitoring data results for the slope failures (referred to as the west slide and east slide) at the Nutana Slope Instability site. Locations of the slope inclinometers and tilt plates are shown in Figure 1.

This memorandum must be read and used in conjunction with the Study Limitations provided in Section 5 that follows the main text and forms an integral part of this document. The reader is specifically directed to this information as it is essential for the proper use and interpretation of this document.

1.1 Background

The west slide occurred in June 2012 and impacted a slope area approximately 70 m (230 ft) long and 40 m (130 ft) wide. It is most pronounced in the back yards of 229, 231, 233/235, and 237/239 11th Street East, through the back alley, and into the back yard of 222 Saskatchewan Crescent East.

The east slide occurred in June 2013 and impacted a slope area of approximately 50 m (165 ft) long and 30 m (100 ft) wide. It is most pronounced in the back yards of 303, 305, 307, and 309 11th Street East, through the back alley, and into the back yard of 306, 310 and 316 Saskatchewan Crescent East.

2 FIELD MONITORING RESULTS

Instrumentation monitoring of the slope inclinometers and tilt plates were collected by WSP on July 18, 2025. The monitoring results for this period are summarised below. Photos of the site conditions are attached to this memorandum in Appendix A. The results of the instrumentation monitoring are presented in Appendix B.

2.1 Slope Inclinometer Data

The slope inclinometer plots are shown in Appendix B.

- Inclinometer COS-13-002 plots continue to show a slight drift, with insignificant movement (less than 2 mm or 0.08) between July 30, 2013 and July 18, 2025.

- Inclinometer COS-13-004 has in recent years indicated drift both in the direction parallel to and along the direction of the laneway. The inclinometer plots indicate insignificant movement (less than 2.0 mm or 0.04 in) between May 9 and July 18, 2025.
- Inclinometer COS-13-005 indicated insignificant movement (less than 2 mm or 0.08 in) between May 9 and July 18, 2025.
- Inclinometer 20-109 has indicated approximately 27 mm of cumulative downslope movement between October 28, 2020 and July 18, 2025, with insignificant movement (less than 2.0 mm or 0.04 in) between May 9 and July 18, 2025. The zone of movement is approximately 2.5 m below the top of casing. The rate of slope movement has increased from approximately 1 mm/yr between October 28, 2020 and May 5, 2022, to approximately 5 mm/yr between May 5, 2022 and May 9, 2025.
- Inclinometer 20-111 plots continue to show drifts in upslope direction, with approximately 4.5 mm (0.18 in) of cumulative movement between October 28, 2020 and Jul 18, 2025.

2.2 Tilt Plate Data

The results of the tilt plate monitoring are shown on Figure B1 for the City of Saskatoon tilt plates, and in Figure B2 for the tilt plates installed on Saskatoon Light and Power power poles:

- Tilt plates TP4, TP5, and TP6 indicate insignificant changes in angle of tilt (less than 0.05 degrees) between August 23, 2013 and July 18, 2025.
- Tilt plate TP7 could not be accessed at the time of instrumentation monitoring and will be read during a future visit.
- Tilt Plate SLP3 indicated a change in angle of tilt of approximately 0.08 degrees, towards the south, between May 9 and July 18, 2025. However, past readings for SLP3 have been erratic and appear to be affected by seasonal changes.
- Tilt Plate SLP4 indicated an insignificant change in angle of tilt (less than 0.05 degrees) between May 9 and July 18, 2025. The cumulative change in angle of tilt from May 2019 to July 2025 is approximately 0.30 degrees towards the north.
- Tilt plate SLP5 indicated an insignificant change in angle of tilt (less than 0.05 degrees) between May 9 and July 18, 2025.
- Tilt plate SLP6 indicated an insignificant change in angle of tilt (less than 0.05 degrees) between May 9 and July 18, 2025.

3 RECOMMENDATIONS

Slope inclinometer 20-109 indicates a zone of movement a depth of approximately 2.5 m below the top of casing with a rate of movement approximately 5 mm/yr between May 5, 2022 and July 18, 2025, an increase from 1 mm/yr for the period between October 2020 and May 2022. Inclinometer 20-111 plots continue to show drifts in upslope direction, with approximately 4.5 mm (0.18 in) of cumulative movement between October 28, 2020 and July 18, 2025.

WSP recommends that the intended final monitoring trip be completed for the Nutana site for the fall of 2025.

4 CLOSURE

This memorandum provides a factual summary of the instrumentation monitoring results from the July 2025 period. WSP is providing this information for the specific use of the City of Saskatoon. No other party may rely on the information provided herein, or any portion thereof. This memorandum is not intended to serve as a geotechnical assessment and therefore should not be used as the geotechnical basis for any future developments.

We trust that this memorandum provides you with the information you require at this time.

5 STUDY LIMITATIONS

WSP Canada Inc. (WSP) has prepared this document in a manner consistent with that level of care and skill ordinarily exercised by members of the engineering and science professions currently practising under similar conditions in the jurisdiction in which the services are provided, subject to the time limits and physical constraints applicable to this document. No warranty, express or implied, is made.

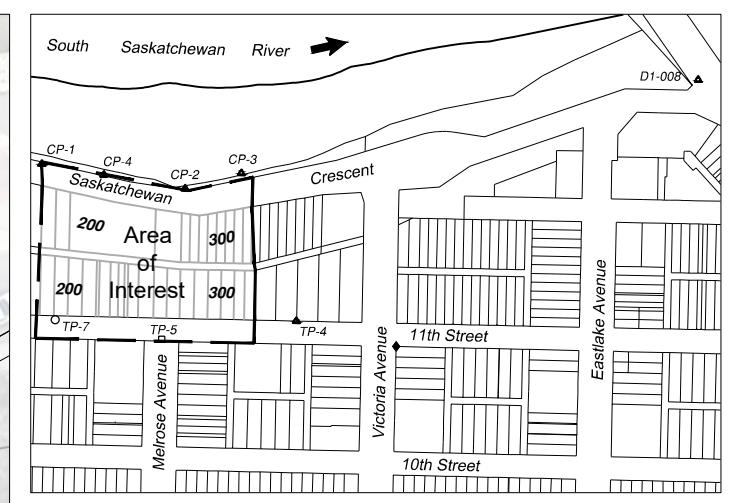

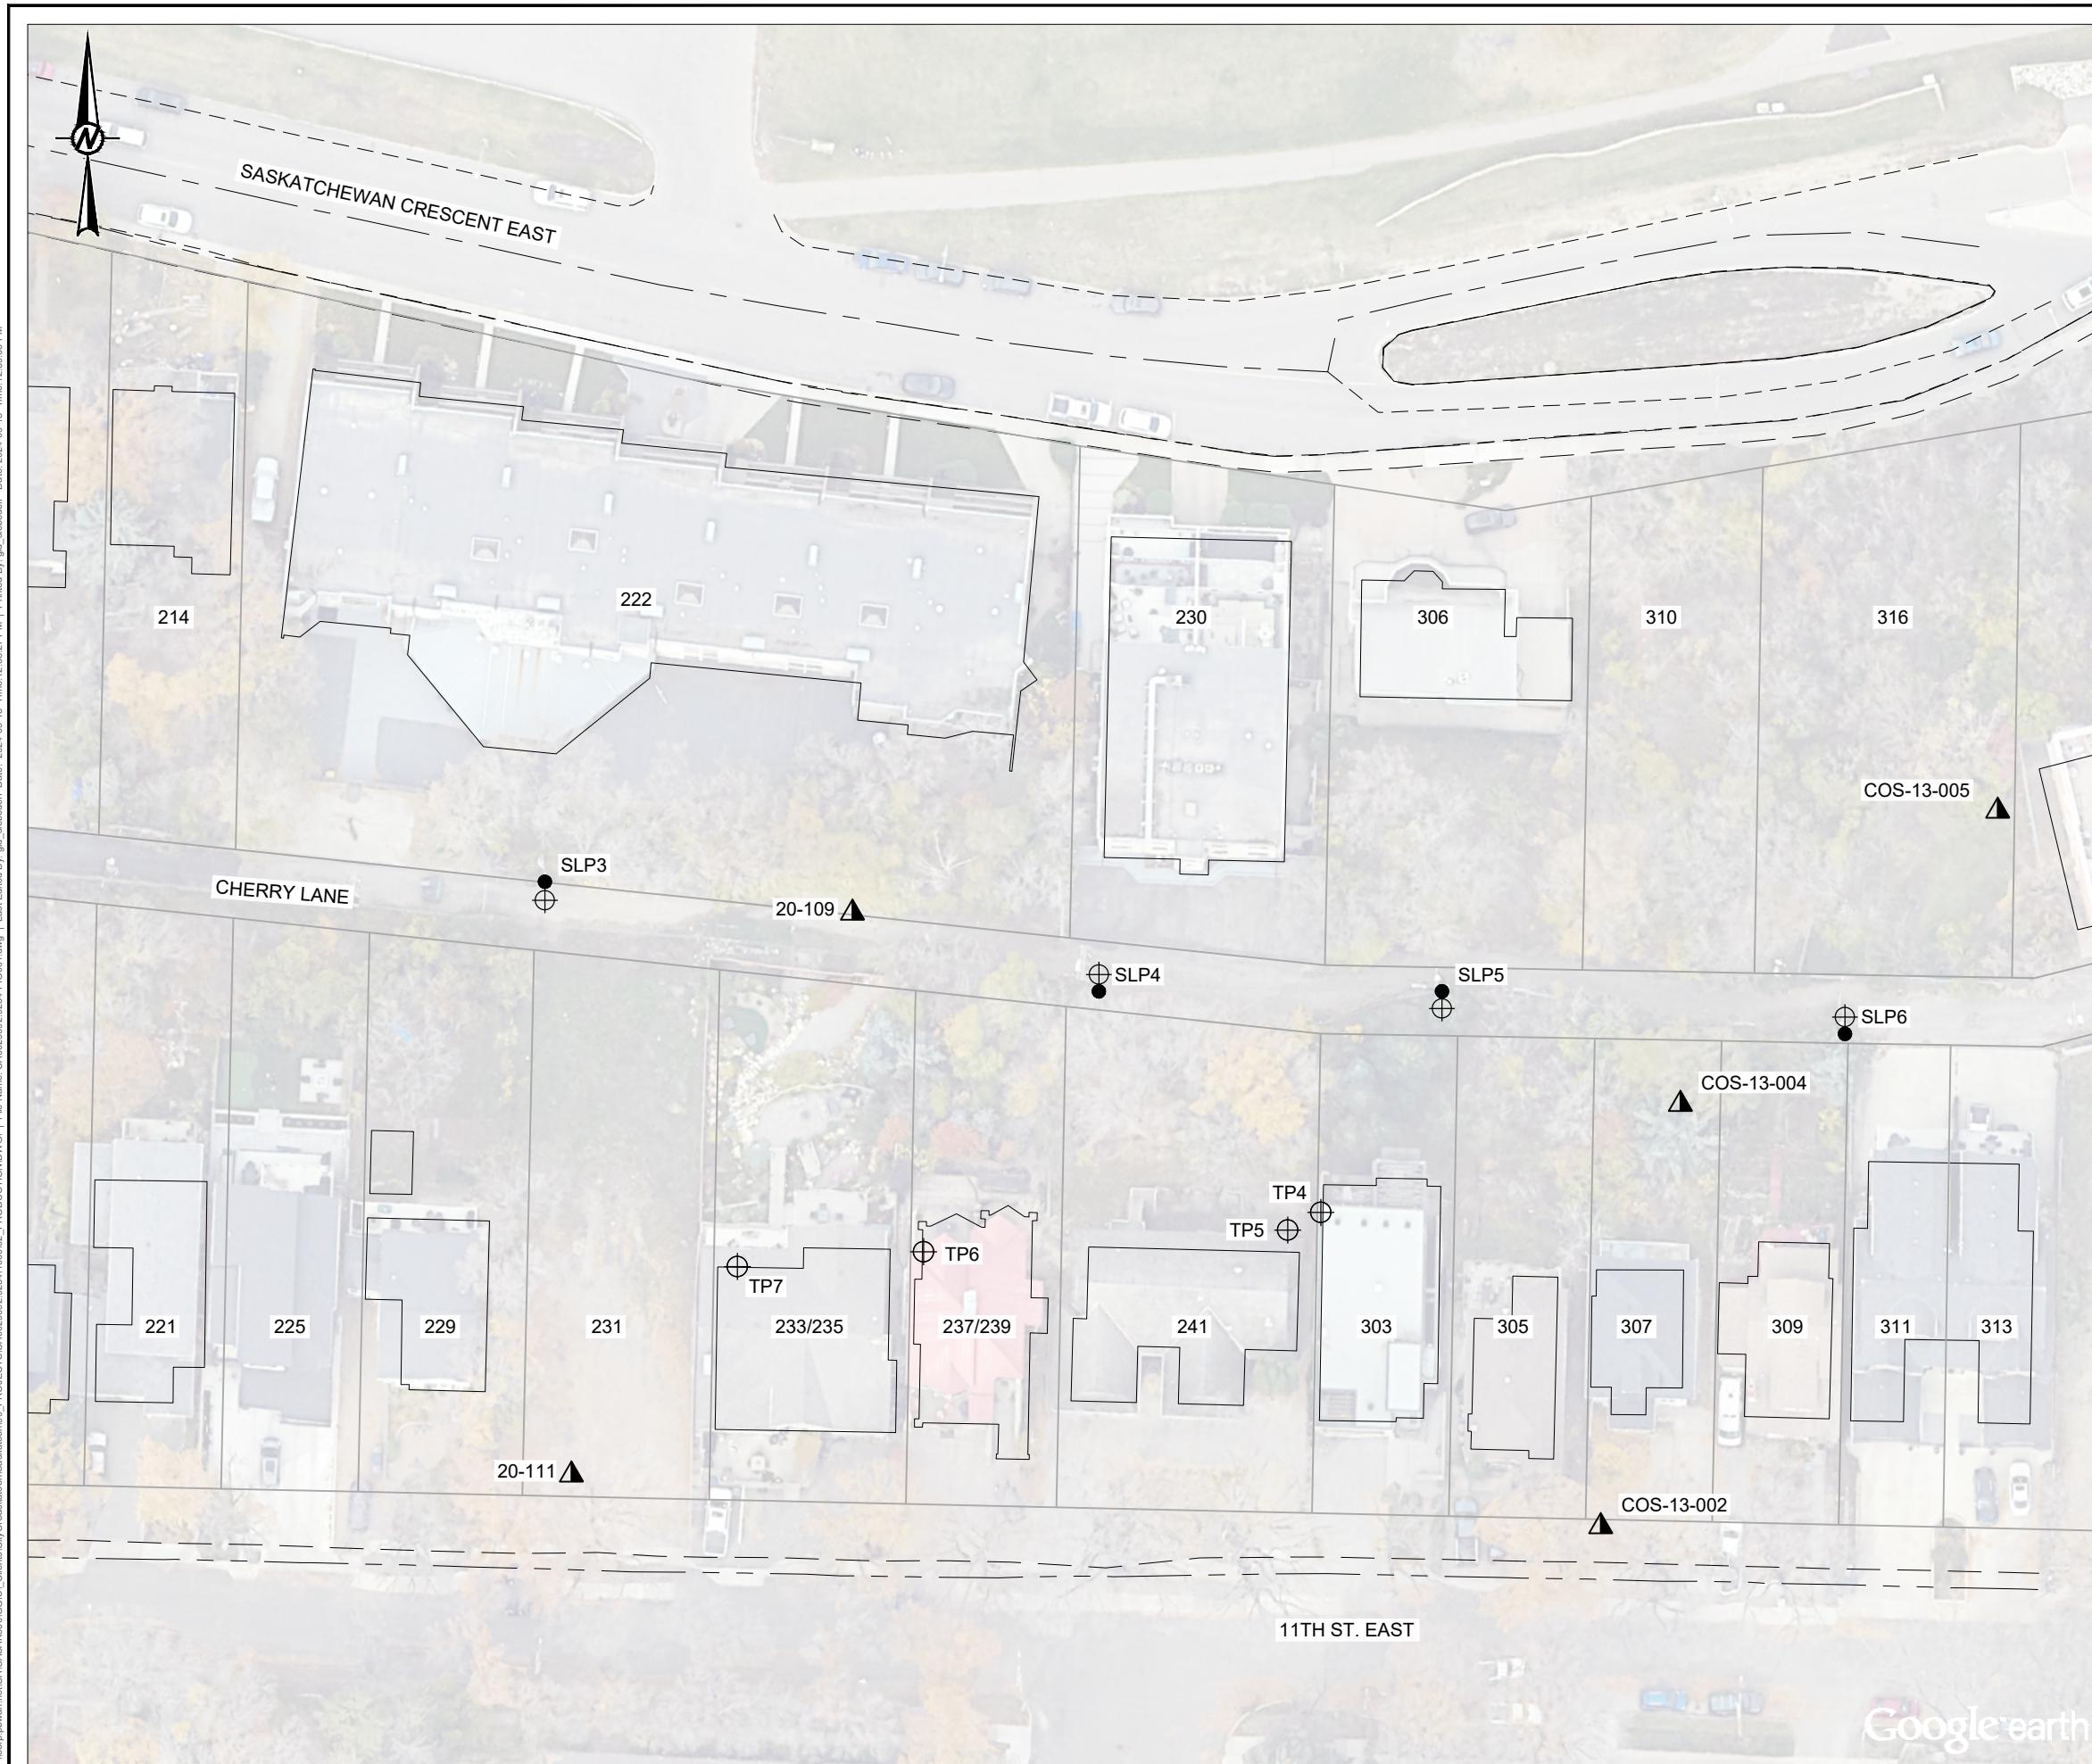

This document, including all text, data, tables, plans, figures, drawings and other documents contained herein, has been prepared by WSP for the sole benefit of the City of Saskatoon (COS). It represents WSP's professional judgement based on the knowledge and information available at the time of completion. WSP is not responsible for any unauthorized use or modification of this document. All third parties relying on this document do so at their own risk.

The factual data, interpretations, suggestions, recommendations and opinions expressed in this document pertain to the specific project, site conditions, design objective, development and purpose described to WSP by COS and are not applicable to any other project or site location. To properly understand the factual data, interpretations, suggestions, recommendations and opinions expressed in this document, reference must be made to the entire document.

This document, including all text, data, tables, plans, figures, drawings and other documents contained herein, as well as all electronic media prepared by WSP are considered its professional work product and shall remain the copyright property of WSP. COS may make copies of the document in such quantities as are reasonably necessary for those parties conducting business specifically related to the subject of this document or in support of or in response to regulatory inquiries and proceedings. Electronic media is susceptible to unauthorized modification, deterioration, and incompatibility and therefore no party can rely solely on the electronic media versions of this document.

This document is provided to COS "as is", without warranty of any kind either expressed or implied. Only the native secured file is considered true and final. Any reuse, alteration, extraction, edit, or reproduction of this document or unsecured versions of this document will be at the sole risk and responsibility of the user, without any liability or legal exposure to COS its affiliates, and their respective directors, officers, employees, agents, consultants and sub contractors.

TILT PLATES

Notes:

- 1) Positive changes in tilt indicate tilting toward the monitoring structure.
- 2) TP1, located on the retaining wall between 230 and 306 Sask. Cres., is not monitored for health and safety reasons; monitoring results for this tilt plate show a change in angle of tilt of approximately 9 degrees between August 2013 and June 2014.
- 3) TP3 and TP8 are destroyed, and TP2 is buried.
