## 2018 Annual <br> Rainfall Report

## Monitoring and Modeling

Saskatoon Water
Transportation \& Utilities Department

City of
Saskatoon

## EXECUTIVE SUMMARY

The following report provides a summary of Saskatoon's 2018 rainfall season (April to September) and a comparison with historical rainfall. Highlights of the report include the following:

- In 2018, 206 mm of rainfall accumulated, which was less than the historical average of 265 mm .
- On average, rainfall occurred on 32\% of days in 2018.
- Based on the weighted average, 19 mm was the largest amount of rainfall to accumulate in a single day.
- Saskatoon had a moderately dry spring in 2018. The average rainfall between April and June since 1900 is 127 mm . Saskatoon received 85 mm which falls in the $25^{\text {th }}$ percentile for this time period.
- Saskatoon had a moderately dry summer in 2018. The average rainfall between July and September since 1900 is 137 mm . Saskatoon received 121 mm which falls in the $40^{\text {th }}$ percentile for this time period.
- 2018 had an average of one rain event with a return period of two years or greater.

## INTRODUCTION

The purpose of this report is to provide a summary of the 2018 rainfall season in Saskatoon and a comparison of this rainfall data with historical rainfall data. Within the scope of this report, a rainfall season is defined as the time period between April $1^{\text {st }}$ and September $30^{\text {th }}$. Data between 1900 and 2011 was obtained from the Environment Canada rain gauge while 2012 to 2016 data was obtained from eight City of Saskatoon rain gauges. In 2017, one of the City of Saskatoon rain gauges was decommissioned and therefore seven rain gauges remain. The name, location, approximate area, and total seasonal rainfall of each rain gauge is shown below.

## SUMMARY OF RAINFALL IN 2018

A daily weighted average for all City of Saskatoon rain gauges functioning on a particular day was calculated to determine the average daily rainfall for Saskatoon. The following graph depicts the average daily rainfall that occurred in Saskatoon throughout the 2018 rainfall season.

Figure 2: 2018 daily rainfall.
Based on the weighted average, the largest amount of rainfall occurred on July $11^{\text {th }}, 2018$ with a total of 19 mm . This rainfall accounted for approximately $9 \%$ of the total rainfall that occurred in 2018.

Table 1 presents the percentage of days with total rainfall greater than or equal to 0.2 mm , $1 \mathrm{~mm}, 5 \mathrm{~mm}, 10 \mathrm{~mm}$, and 25 mm at each rain gauge.

Table 1: Total daily rainfall percent occurrence.

| Location | $\geq \mathbf{0 . 2} \mathbf{~ m m}$ | $\geq \mathbf{1} \mathbf{~ m m}$ | $\mathbf{\geq 5} \mathbf{~ m m}$ | $\geq \mathbf{1 0} \mathbf{~ m m}$ | $\geq \mathbf{2 5} \mathbf{~ m m}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Average | $\mathbf{3 2 \%}$ | $\mathbf{2 0} \%$ | $\mathbf{7 \%}$ | $\mathbf{3 \%}$ | $\mathbf{0} \%$ |

On average, rainfall occurred on 32\% of days in 2018.

2018 Annual Rainfall Report
Water and Sewer Planning

## SUMMARY OF RAINFALL IN 2018

The total seasonal rainfall for 2018 was 206 mm. Figure 3 depicts the accumulation of rainfall throughout the 2018 season.

Figure 3: 2018 rainfall accumulation.
The 2018 rainfall season experienced a moderately dry spring, with the months of April to June accumulating a total of 85 mm of rain, which is the $30^{\text {th }}$ lowest spring rainfall out of 119 years since 1900. This rainfall accounted for approximately $41 \%$ of the total rainfall that occurred throughout the season. The remaining $59 \%$ of the total rainfall occurred between July and September, accumulating a total of 121 mm of rain. This is the $49^{\text {th }}$ lowest summer rainfall out of 119 years since 1900 .

## HISTORICAL COMPARISON

The average seasonal rainfall from 1900 to 2018 in Saskatoon is 265 mm which is depicted by the light blue line in Figure 4. The 2018 seasonal rainfall of 206 mm was below average and is the $27^{\text {th }}$ lowest seasonal rainfall of the 119 years of data. The lowest seasonal rainfall occurred in 2001 with 131 mm, which is less than half of the average seasonal rainfall. A table containing the seasonal rainfalls from 1900 to 2018 can be found in Appendix A.

Figure 4: Seasonal rainfall (1900-2018).

## HISTORICAL COMPARISON

The following graph provides a comparison of the maximum amount of rainfall to occur in a single day in each season. The average maximum rainfall in a single day in a season is 36 mm from the years 1900 to 2018 and is represented by the light blue line in Figure 5. During the 2018 rainfall season, the maximum rainfall to occur within a single day was 19 mm , which occurred on July $11^{\text {th }}$. This is the $10^{\text {th }}$ lowest rainfall to occur in a single day out of the 119 years of data.

Figure 5: Maximum daily rainfall.
As can be seen in the graph above, the lowest maximum daily rainfall occurred on July $19^{\text {th }}$, 1987, with a total of 15 mm of rain. As well, only one of the last six years had a daily rainfall which exceeded the historical average.

## CLASSIFYING RAIN EVENTS

Rain events in Saskatoon are often localized. Therefore, a rain event may only occur at a few of the seven rain gauges located throughout the city. In order to compare the severity of rain events, their return period must be determined. A return period provides an indication of the likelihood of an event. For example, a rain event with a return period of 2 years has a $50 \%$ chance of occurring in any given year. For comparison, a rain event with a return period of 100 years has a $1 \%$ chance of occurring in any given year. The following table provides a summary of the criteria used to determine the return period of each rain event.

Table 2: Criteria for determining return period of a rain event.

| Time <br> (minutes) | Intensity (mm/hr) |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{5 - Y e a r}$ | $\mathbf{2 5 - Y e a r}$ | $\mathbf{1 0 0 - Y e a r}$ |  |
| 10 | 53 | 85 | 132 | 168 |
| 15 | 41 | 67 | 104 | 133 |
| 30 | 26.4 | 46.1 | 74 | 97 |
| 60 | 16.6 | 28.9 | 46.5 | 60 |
| 120 | 10.7 | 17.5 | 27.3 | 35 |
| 360 | 4.7 | 7.0 | 10.3 | 12.9 |
| 720 | 2.73 | 3.90 | 5.59 | 6.91 |
| 1440 | 1.56 | 2.18 | 3.07 | 3.76 |

For the purposes of this report, two different methods were utilized to determine the number of rain events with a return period of $2,5,25$, or 100 years between 2012 and 2018. It should be noted that within this report, rain events with the same return period may include any of the durations as outlined in Table 2. The first method determined the average number of rain events for each return period by adding together the number of events in a season with the same return period at each of the city's rain gauges and dividing that number by the total number of rain gauges (seven). The following table provides a summary of these values. A more detailed table can be found in Appendix B.

Table 3: Average frequency of rain events.

|  | Return Period | $\mathbf{2 0 1 2}$ | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4}$ | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Average | $2-5$ Year | 4 | 1 | 3 | 1 | 1 | 1 | 1 | 12 |
|  | $5-25$ Year | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 1 |
|  | $25-100$ Year | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
|  | $>100$ Years | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Total | $\mathbf{4}$ | $\mathbf{1}$ | $\mathbf{3}$ | $\mathbf{2}$ | $\mathbf{1}$ | $\mathbf{1}$ | $\mathbf{1}$ | $\mathbf{1 3}$ |  |

## CLASSIFYING RAIN EVENTS

In Table 4, the rain events were tallied using the same method as Table 3, except only rain events with a duration of 1 hour or greater were counted.

Table 4: Average frequency of rain events greater than or equal to 1 hour duration.

|  | Return Period | $\mathbf{2 0 1 2}$ | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4}$ | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Average | $2-5$ Year | 3 | 1 | 2 | 1 | 0 | 1 | 0 | 8 |
|  | $5-25$ Year | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 1 |
|  | $25-100$ Year | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
|  | $>100$ Years | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
|  | Total | $\mathbf{3}$ | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{2}$ | $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{0}$ | $\mathbf{9}$ |

The second method determined the number of days per year that a major rain event occurred at one or more rain gauges. If the rain gauges throughout the City recorded varying return periods on a given day, the maximum return period was counted as the rain event for that day. The following table provides the number of days per year that a major rain event occurred at one or more rain gauges.

Table 5: Overall frequency of rain events.

|  | Return Period | $\mathbf{2 0 1 2}$ | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4}$ | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Overall | $2-5$ Year | 8 | 5 | 6 | 3 | 3 | 2 | 3 | 30 |
|  | $5-25$ Year | 0 | 1 | 1 | 0 | 0 | 1 | 0 | 3 |
|  | $25-100$ Year | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 1 |
|  | $>100$ Years | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
|  | Total | $\mathbf{8}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{4}$ | $\mathbf{3}$ | $\mathbf{3}$ | $\mathbf{3}$ | $\mathbf{3 4}$ |

In Table 6, the days per year were tallied using the same method as Table 5, except only days with a rain event of 1 hour duration or greater were counted.

Table 6: Overall frequency of rain events greater than or equal to 1 hour duration.

|  | Return Period | $\mathbf{2 0 1 2}$ | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4}$ | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Overall | $2-5$ Year | 6 | 4 | 3 | 1 | 2 | 1 | 2 | 19 |
|  | $5-25$ Year | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 1 |
|  | $25-100$ Year | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 1 |
|  | $>100$ Years | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
|  | Total | $\mathbf{6}$ | $\mathbf{4}$ | $\mathbf{3}$ | $\mathbf{2}$ | $\mathbf{2}$ | $\mathbf{2}$ | $\mathbf{2}$ | $\mathbf{2 1}$ |

## CONCLUSION

Overall, the 2018 rainfall season had an accumulation which was marginally less than the historical seasonal average. During these six months, three rain events occurred with a return period of 2-5 years. The largest rain event occurred on July $11^{\text {th }}$ and was determined to be a 2-5 year return period event. However this event was only experienced at two of the City's seven rain gauges. The remaining five rain gauges experienced a rain event with a smaller average intensity resulting in an event with a return period which was less than two years.
