**SUBJECT: Bulk Sample Analysis Report Aspen Ridge/ Kensington Jobsite Trailers**

Please find attached the laboratory results for the bulk samples collected August 15, 2017 from two jobsite trailers, one located at Aspen Ridge Developments, the other at Kensington Developments. The samples were analyzed for the identification of asbestos. Asbestos **was not** detected within the samples.

The results for the samples submitted were obtained by examination in accordance with the current USEPA 600/R-93/116 Method for the analysis of asbestos in building materials using polarized light microscopy and dispersion staining techniques. The detection limit of this method is listed as less than 1% by volume.

While on site Bersch Consulting examined the spaces for any products possibly containing asbestos. The ceiling and wall composition were both composed of material not known to be asbestos containing. Investigation of the registers in the Kensington Trailer revealed two layers of floor sheathing with no apparent flooring between them. The HVAC system in the Aspen Ridge trailer was installed overhead, consequently no investigation of flooring, other than what was on the surface, could take place. This test report relates only to the materials sent for examination and any use or extension of the information by the client of these results is the responsibility of the client.

If any questions arise on the results of the attached information, please contact our office. Thank you for this opportunity of service.

Sincerely,

Evan Westad
