

# SASKATCHEWAN HEALTH POPULATION BY NEIGHBOURHOOD 2017

## Saskatchewan Health Populations

### Data Source

The following pages present data from the Health Insurance Registration File (HIRF) for the City of Saskatoon as reported by eHealth Saskatchewan. This information, in other years, had been referred to as the Saskatchewan Health Insurance Registration (SHIR) dataset. Each year, eHealth Saskatchewan provides the Community Services Department with all records from its Covered Population (Saskatoon File). Covered Population refers to all residents eligible for health insurance benefits including Registered Indian Persons. Each record represents a person identified by eHealth Saskatchewan as living in Saskatoon and shows the neighbourhood, age and sex of the person. The data is aggregated by neighbourhood, sex and five-year age groups and merged with a file that links postal codes with neighbourhood codes. The data is then further aggregated according to neighbourhood.

### Data Presentation

The neighbourhoods shown on the Neighbourhood Boundary Map and on each spreadsheet are those used for data retrieval for the Federal Census. Some postal codes cannot be assigned to a neighbourhood. The postal codes aggregated into neighbourhood code 999 (no match) include the following:

- a) Postal codes reported on the HIRF files that do not show up as valid codes in the Canada Post database.
- b) Postal codes no longer in use by Canada Post (Retired).
- c) Postal codes representing post office addresses (for neighbourhood totals only). Although post offices have a location within a neighbourhood there is no way of determining if the population with that code actually lives in the neighbourhood. Post office addresses are included in the total Saskatoon population.
- d) Postal Codes representing Industrial Neighbourhoods without any known dwelling units and Management Areas (with the exception of U of S Lands South M.A).

### Reliability of eHealth Saskatchewan Data

While we regard the eHealth Saskatchewan data as the best available source of data both in terms of timeliness (published annually) and coverage (specifically counts Status Indian populations), the eHealth Saskatchewan data is subject to variability. Year-to-year figures should always be viewed as containing some variability that is attributable to the data range rather than actual population dynamics. In addition, remember the purpose of the HIRF is not to count people but to register people for health benefits. eHealth Saskatchewan's first objective is to get people registered after which, the methodology for updating information is less urgent.

The accuracy of neighbourhood populations depends on the accuracy of the postal code information given to eHealth Saskatchewan. eHealth Saskatchewan registration relies on postal codes to identify place of residence. If the postal code reported to Saskatchewan Health is wrong, then the population is incorrectly classified to a neighbourhood. The population reported for industrial neighbourhoods containing no residential units provides examples where data can not be assigned to an appropriate neighbourhood. In 2014-2017, population assigned to an industrial neighbourhood containing no residential units was combined under "Non-Residential Neighbourhoods." This includes the following neighbourhoods: Agriplace, Airport Management Area, CN Industrial, Gordie Howe Management Area, Hudson Bay Industrial, Marquis Industrial, and U of S Lands Management Area. In previous years, these records were combined under "faulty/unmatched postal code." In 2017 "Non-Residential Neighbourhoods" was expanded to include Blairmore Development Area, Central Industrial, CN Yards Management Area, North Development Area, North Industrial, North West Development Area, Southwest Industrial, and Sutherland Industrial. Previously, these areas were combined under "faulty/unmatched postal codes."

It is important to note the weaknesses of the HIRF data so that use of the information is not clouded by unrealistic expectations. This is not census data; it is data on population compiled from a secondary source. However, many applications benefit from annual population data and we believe the HIRF source is the most reliable and available source. The Planning & Development Division is confident that, in relative terms, comparison of the HIRF population from 2007-2017 data is valid and reliable for most purposes.

### Why Does eHealth Saskatchewan population data vary?

Several factors contribute to the variability of eHealth Saskatchewan annual population figures:

1. The three-year renewal cycle for Health Card validation stickers introduces error in the data that may be responsible for significant swings in population figures. Since the three-year renewal program began in 1990, almost every "catch-up" year (1994, 1997, 2000, 2003, 2006, 2009, 2012, 2015) has shown a decrease in Saskatoon's covered population. These decreases are consistent with decreases in the provincial Covered Population in these same years. Rather than reflecting population decreases in the years following card renewal, it is more likely that the population of the intervening years has been over estimated, clearly affecting the consistency of total population counts. It is the opinion of the Planning & Development Division that Saskatoon's population is overestimated between renewal years because people leaving the city do not notify eHealth Saskatchewan of a change as readily as those seeking health benefits as they enter the city.

2. Postal codes are used to determine the place of residence. Therefore, the accuracy of the information given to eHealth Saskatchewan affects the population data. Further, some postal codes may cover a wide area, both inside and outside of city limits (e.g. Rural Routes) or cross neighbourhood boundaries. In these cases, administrative judgement is used to determine how the population values should be attributed. In the case of Rural Routes, these values were included in the "Unmatched" and/or "Postal Outlet" category prior to 2010, and in 2010 - 2017 were filtered out completely and assigned their own category. In the case of postal codes that cross neighbourhood boundaries, counts were attributed to the neighbourhood deemed to have the highest number of dwelling units in the applicable postal code.

3. Saskatoon has a large student population that tends to be highly transient from academic year to academic year. As a result, students may not retain their Saskatoon address as an original place of residency. A three-year health card renewal process will result in some degree of fluctuations due to both population movements and residency in this sector of the population.
