A well-designed cycling network needs to be visible, intuitive and provide connections between destinations and neighbourhoods.

Ideally, a cycling network serves users of all ages and abilities—people from ages 8 to 80. It should offer practical route options for those who are interested in cycling, but who may not be comfortable riding on busy streets with high traffic volumes and speeds.

The design and development of a long-term bicycle network for Saskatoon is based on five network planning principles:

1. Provide an interconnected system of facilities that is **comfortable** and attractive for all users.

2. Increase **coverage** to ensure all residents are within 400m of a designated bicycle route. The designated route may include both AAA and non-AAA facilities.

3. Focus on high-quality **connections** to and from downtown with all areas of the city and create a downtown network.

4. Provide a network that provides direct **access** to major shopping centres, key employment areas, schools, and recreational areas/facilities.

5. **Improve** by continuously connecting to existing cycling routes as the network expands.
