Dear Resident:

Re: Traffic Calming Installation

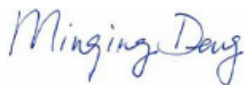

The City of Saskatoon (City) is undertaking a pilot project to install temporary traffic calming devices in neighbourhoods that do not meet the current criteria for vertical traffic calming installations. This pilot is being initiated at the direction of City Council and is in response to inquiries from residents to investigate new methods of reducing neighbourhood traffic speeds.

The traffic calming device that has been selected for this pilot project is a rubber speed hump. Four locations have been approved for the pilot including **29th Street W between McMillan Avenue and Avenue L North**. A rubber speed hump will be temporarily installed at 60 m east of the intersection of McMillan Avenue and 29th Street West and will remain in place until the fall so that City traffic engineers can monitor its effectiveness.

When the effectiveness of this tool is measured, the City will consider community feedback. A feedback form will be circulated in late summer to collect your input.

If you have any immediate questions, comments, or concerns, please contact us at NTR@saskatoon.ca or 306-975-2454.

Sincerely,

Minqing Deng, P.Eng.
Transportation Engineer
Transportation Division
